If your personal data on the Verification page has already been verified, in order to resume the Withdrawal of Funds you have one more step left – Account Activation. To Activate your Account, please follow these steps:

[1]. Make a Verification Deposit: Deposit \$150 into your account. You can do this by direct crypto payment or by Bank card and other methods available for your location. Navigate to the Profile – Deposit page or follow this link <https://bulcas.com/profile/deposit>

[2]. Automatic Verification: Once the system detects your deposit, your account will be automatically Activated.

[3]. Activation Confirmation: Success! After verification, the deposit will be credited to your Account and you can withdraw it if needed or playing Games or Slots.

This industry, unfortunately, has a high rate of fraudulent activity, and this sort of steps helps our Automatic System drastically reduce fraud and ensure our customers remain secure. This is a one-time procedure, after this steps your account will be forever Activated.

If you need more detailed instructions on a particular deposit method, please let us know and feel free to contact our support team.

To ensure the security of your account and comply with regulatory requirements, you are required to complete the verification process. This includes making a one-time verification deposit of \$150. Once the deposit is successfully made, it will be credited to your account and can be used for betting or withdrawn immediately after your account is activated.

This requirement is outlined in Section 4.7.2 of our Terms of Service: <https://bulcas.com/info/tos>

Please note that failure to complete the verification process may result in restrictions on your account, including the inability to withdraw funds.
